DESCRIPTORS: *Oxygen, Impurities, *Cutting torches, Effectiveness, Experimental data.

Oxygen purity has a substantial effect on the oxygen groove cutting process. Oxygen groove cutting on ordinary low carbon steel is impossible when the oxygen purity is less than 95%. For each grade of oxygen purity, there is an optimum cutting speed which corresponds to maximum cutting efficiency and minimum specific oxygen consumption. When, in the purity range of 99.5% to 97.0%, the oxygen purity is (Machinery--Manufacturing, TT, v. 9, no. 11) (over)
